Calvin Le

Software Engineer | Full-Stack | Cloud-Native (GCP) | Engineering Enablement
calvinle0@proton.me • linkedin.com/in/calvinle97 • calvinle.io

SUMMARY

Software Engineer with 7+ years of experience building full-stack and cloud-native applications in Java, TypeScript/JavaScript, Python, and Go. Delivered microservices on Google Cloud Platform (Cloud Run, Pub/Sub, Cloud Tasks), CI/CD pipelines, and observability tooling in Agile teams at Oracle Health and The Home Depot. Raises team output through code review, testing standards, and mentorship: taught 50+ junior engineers at Oracle Health and mentored 10 engineers over four years at The Home Depot, 100% of whom received full-time offers.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, TypeScript, Python, Go, Ruby, SQL, HTML/CSS
- **Frameworks & Testing:** React, Spring Boot, Ruby on Rails, Pydantic, JUnit, Jest, pytest, RSpec, Ruff
- **Cloud & DevOps:** Amazon Web Services (Lambda, API Gateway, Bedrock, IAM, SSM Parameter Store, CloudWatch), AWS SAM, Google Cloud Platform (Cloud Run, Pub/Sub, Cloud Tasks, Workflows), Firebase, Docker, GitHub Actions, Jenkins, CI/CD
- **Practices:** Microservices, serverless architecture, event-driven architecture, REST API design and integration, schema validation, test-driven development, code review, Agile/Scrum, observability, version control (GitHub)
- **AI Engineering:** Amazon Bedrock (structured outputs), prompt engineering, GitHub Copilot, Glean
- **Enablement & Leadership:** Mentorship, technical instruction, onboarding, curriculum design, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Snippet Sentry **Kansas City, MO (Remote)**
Software Engineer *April 2026 - July 2026*

- Extended the compliance archiving platform to Signal, joining the existing WhatsApp, iMessage, and SMS integrations, so customers could meet audit and regulatory recordkeeping requirements, by capturing 10+ message types and activities, including replies, edits, quotes, media, reactions, deletions, and read receipts.
- Delivered consistent identity resolution and audit-trail completeness across supported channels by building TypeScript decryption and synchronization logic that retrieves Signal contacts and group-conversation metadata through the Signal API, pulling additional contact data whenever a profile key was available (after a user messaged or accepted a group invite).

The Home Depot **Atlanta, GA (Remote)**
Software Engineer II, OrangeMethod Talent Pipeline *July 2023 - January 2026*

- Informed the design of a unified, platform-wide observability dashboard for monitoring and alerting by evaluating testing environments and code-health tooling with 10+ cross-functional engineering teams, including SAP Retail/ERP, Orange Access, and Sidekick.
- Improved code quality and maintainability of full-stack Java and JavaScript curriculum codebases by refactoring and modernizing them to current engineering standards.
- Piloted GenAI-assisted engineering practices by authoring prompt engineering guides for unit testing and technical auditing workflows and delivering them in workshops to 5+ engineering teams.
- Standardized quality evaluation across 5 engineering cohorts by authoring technical assessment rubrics and structured code review criteria for Java, Go, Python, and JavaScript, aligned to industry and internal standards.
- Ramped new engineering hires on platform standards, engineering culture, and collaboration tooling by designing and delivering 5 two-day technical onboarding programs.
- Streamlined onboarding for junior engineers, leading managers to request team placements from later cohorts, by curating technology-stack-specific learning content.
- Mentored 10 engineers across both Software Engineer roles over four years (2-3 per cohort) on technical and collaborative best practices, with 100% receiving full-time offers.

Software Engineer I, OrangeMethod Talent Pipeline *November 2021 - July 2023*

- Built a full-stack proof-of-concept application implementing CRUD operations, DOM event handling, and application state management.
- Strengthened software engineering fundamentals and production readiness for 11 engineers-in-training (2 directly mentored) by delivering live technical instruction with hands-on examples and mentoring to close knowledge gaps.

Oracle Health **Kansas City, MO**

Associate Software Engineer, DevAcademy Instructor *January 2021 - November 2021*

- Advanced production readiness for 50+ junior engineers across 5 cohorts, as their selected instructor, by reviewing pull requests weekly and running paired feedback sessions on code quality and collaboration.
- Prepared junior engineers to join production teams by onboarding them to Agile/Scrum methodology and unit testing practices.

Software Engineer I *February 2019 - January 2021*

- Improved operational observability for DevAcademy staff by engineering Academy Analytics, a metrics dashboard that tracks long-term collaboration-tool usage trends using data from 4 infrastructure services.
- Automated weekly data collection for the dashboard by establishing a cron job that fetches data from the 4 infrastructure services and stores it with ActiveRecord (Ruby on Rails).

PROJECTS

- **words2macros (Python, AWS Lambda, API Gateway, Bedrock):** Built a serverless API that turns plain-language meal descriptions into macronutrients, published at github.com/calvinle/words2macros. An LLM parses food items through Bedrock structured outputs while USDA data supplies every nutrient value, and Pydantic models validate each payload that crosses a trust boundary, re-prompting once and returning a 422 rather than letting unvalidated data reach the calculations. Deployed with AWS SAM: arm64 Lambda behind a throttled HTTP API, least-privilege IAM policies, the USDA key in SSM Parameter Store, and CloudWatch log retention; tested with pytest and linted with Ruff.
- **Smart Fitness Tracker (TypeScript, Go, GCP):** Built a workout logger and stats aggregator as containerized Cloud Run microservices, using Workflows for orchestration, Pub/Sub for event-driven choreography, and Cloud Tasks for asynchronous processing.
- **calvinle.io (Firebase):** Built and deployed a personal portfolio site that retrieves and persists competition data through the ClosePowerlifting API.

EDUCATION

Colorado State University, Bachelor of Computer Science, 2018

ADDITIONAL

Eagle Scout

- Eagle Project - Funded and coordinated $1,100 for construction of local park kiosk, assigning tasks to volunteers and providing tools and instruction
- 40 Merit Badges earned
